## Programme highlights

- **Lecture on “Regeneration in Dentistry”**  
Fixed prosthesis by means of implants is the treatment of choice today. However, very few are ideal cases. There is always either a loss in hard tissue or soft tissue. In order to get a long lasting, aesthetic and great functional outcome, it is important for us to provide a good foundation in the form of attached gingiva and corticocancellous bone. This presentation will cover topics like sinus grafting, ridge preservation, horizontal augmentation and attached gingiva build up which are critical for long term implant success
- **Demonstration of regenerative procedure**
  - Socket preservation
  - Sinus floor elevation

**Date:** 8<sup>th</sup> March, 2022

**Time:** Lecture – 09.30 am to 11.00 am  
Demonstration- 11.30 am to 1.00 pm
